Reece Resnik

Seattle, WA • (775) 267-7751 • rresnik2@gmail.com • linkedin.com/in/reece-resnik • github.com/rresnik2

01/Education

University of Washington — *Tacoma, WA* — Expected Dec 2027

Bachelor of Arts, Computer Science and Systems | Minor: Business Administration | GPA: 3.4

Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Object-Oriented Programming, Software Development & Quality Assurance, Database Systems, Discrete Mathematics, Probability and Statistics in Engineering and Science (IP), Generative AI in Software Development (IP)

Bellevue College — *Bellevue, WA* — Completed 2024

02/Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C#, SQL

Frameworks & Libraries: React, Node.js, FastAPI, OpenCV, MediaPipe, Pandas, Tailwind CSS, NextJS, DaisyUI

Infrastructure & Tools: Linux/Unix, Git/GitHub, Docker, CI/CD, PostgreSQL, SQLite, Firebase/Firestore, REST APIs, JUnit, Raspberry Pi, Vercel, Cloudflare Workers

03/Projects

Gesture-Controlled Tower Defense — *Python, OpenCV, MediaPipe, Raspberry Pi 4* — 2025

- Built a real-time computer vision pipeline that tracks hand landmarks from a live camera feed, and maps recognized gestures to in-game actions, running end to end on a Raspberry Pi 4.
- Tuned capture resolution and per-frame processing to keep the detection-to-render loop responsive on constrained ARM hardware.
- Designed gesture state handling to filter noisy landmark data, reducing false inputs during continuous play.

Leasing CRM — *React, TypeScript, Python/FastAPI, Firestore, Anthropic API* — 2025 – Present

- Designed and deployed a full-stack CRM with a React/TypeScript frontend and a Python/FastAPI backend on Render, backed by Firestore, including an AI assistant built on the Anthropic API.
- Diagnosed a critical Firebase Admin SDK incompatibility by analyzing REST API documentation and refactoring the data access layer onto Firestore's REST API, restoring functionality without rewriting the application.
- Debugged production deployment failures spanning cold-start latency, environment variable misconfiguration, and corrupted service-account credentials.

Overload — *Next.js, TypeScript, Prisma, PostgreSQL, Dexie, Claude API, Playwright* — 2026 – Present

- Built an offline-first strength training log (PWA, overload67.com) where sets save to IndexedDB and sync to PostgreSQL through an outbox, so logging works without a connection.
- Implemented 11 evidence-based insight rules and a weekly review generated by the Claude API, and scoped all data to the signed-in user with Better Auth, passkeys and isolation tests.
- Tested with 4,500+ unit tests plus Playwright end-to-end and visual tests, and reached a 99 Lighthouse score.

Trivia Maze — *Java, SQLite, JUnit* — 2025

- Built the GUI and controller layers of a maze game on a three-person team under an MVC architecture.
- Loaded questions from SQLite to decouple game content from the engine, and wrote JUnit tests for game logic.

04/Experience

Leasing Agent — *Eclipse Staffing LLC, Seattle, WA* — Oct 2025 – Present

- Automated recurring leasing workflows with Python scripts and AI tooling, cutting manual data entry out of daily operations.
- Ramped onto new property systems and requirements across multiple sites during management transitions.

Leasing Agent — *Greystar, Seattle, WA* — Aug 2024 – Aug 2025

- Cut lease generation time from 45 minutes to 15 by designing a standardized lease checklist, which also reduced post-creation corrections.
- Reduced application decision turnaround from 3 days to 1 by clarifying requirements and streamlining handoffs across teams.
